Walmart

You are a Data Analyst in the Physical Stores Pricing Strategy team, working to ensure competitive pricing for essential household items....

Question 1: What is the total sales volume for essential household items in July 2024? Provide the result with a column named 'Total_Sales_Volume'.

```sql
SELECT SUM(quantity_sold) AS total_sales_volume
FROM fct_sales
INNER JOIN dim_products USING(product_id)
WHERE TO_CHAR(sale_date, 'YYYY-MM') = '2024-07'
  AND category = 'Essential Household';
```

Question 2: For essential household items sold in July 2024, categorize the items into 'Low', 'Medium', and 'High' price ranges based on their average price. Use the following criteria: 'Low' for prices below $5, 'Medium' for prices between $5 and $15, and 'High' for prices above $15.

```sql
WITH total AS (
  SELECT product_name,
         AVG(unit_price) AS average_price
  FROM fct_sales
  INNER JOIN dim_products USING(product_id)
  WHERE TO_CHAR(sale_date, 'YYYY-MM') = '2024-07'
    AND category = 'Essential Household'
  GROUP BY product_name
)

SELECT *,
  CASE
    WHEN average_price < 5 THEN 'Low'
    WHEN average_price <= 15 THEN 'Medium'
    ELSE 'High'
  END AS price_category
FROM total
ORDER BY price_category;
```

Question 3: Identify the price range with the highest total sales volume for essential household items in July 2024. Use the same criteria as the previous question: 'Low' for prices below $5, 'Medium' for prices between $5 and $15, and 'High' for prices above $15.

Provide the result with columns named 'Price_Range' and 'Total_Sales_Volume'.

```sql
WITH total AS (
  SELECT product_name,
         AVG(unit_price) AS average_price,
         SUM(quantity_sold) AS total_quantity
  FROM fct_sales
  INNER JOIN dim_products USING(product_id)
  WHERE TO_CHAR(sale_date, 'YYYY-MM') = '2024-07'
    AND category = 'Essential Household'
  GROUP BY product_name
),
final AS (
  SELECT *,
         CASE
           WHEN average_price < 5 THEN 'Low'
           WHEN average_price <= 15 THEN 'Medium'
           ELSE 'High'
         END AS price_range
  FROM total
)

SELECT price_range, SUM(total_quantity) AS total_sales_volume
FROM final
GROUP BY price_range
ORDER BY total_sales_volume DESC
LIMIT 1;
```
