Meta

As a Data Scientist on the Facebook Events Discovery team, you are tasked with analyzing user interaction with event recommendations to enhance the relevance of these suggestions....

Question 1: How many times did users click on event recommendations for each event category in March 2024? Show the category name and the total clicks.

```sql
SELECT
    e.category_name,
    COUNT(c.click_id) AS total_clicks
FROM dim_events e
JOIN fct_event_clicks c USING (event_id)
WHERE c.click_date BETWEEN DATE '2024-03-01' AND DATE '2024-03-31'
GROUP BY e.category_name;
```

Question 2: For event clicks in March 2024, identify whether each user clicked on an event in their preferred category. Return the user ID, event category, and a label indicating if it was a preferred category ('Yes' or 'No').

```sql
WITH click AS (
    SELECT
        c.user_id,
        e.category_name
    FROM fct_event_clicks c
    JOIN dim_events e USING (event_id)
    WHERE c.click_date BETWEEN DATE '2024-03-01' AND DATE '2024-03-31'
),
combine AS (
    SELECT
        c.user_id,
        c.category_name,
        u.preferred_category
    FROM click c
    JOIN dim_users u USING (user_id)
)
SELECT
    user_id,
    category_name AS event_category,
    CASE
        WHEN category_name = preferred_category THEN 'Yes'
        ELSE 'No'
    END AS is_preferred
FROM combine;
```

Question 3: Generate a report that combines the user ID, their full name (first and last name), and the total clicks for events they interacted with in March 2024. Sort the report by user ID in ascending order.

```sql
WITH total AS (
    SELECT
        u.user_id,
        u.first_name,
        u.last_name,
        COUNT(c.click_id) AS total_clicks
    FROM dim_users u
    JOIN fct_event_clicks c USING (user_id)
    WHERE c.click_date BETWEEN DATE '2024-03-01' AND DATE '2024-03-31'
    GROUP BY u.user_id, u.first_name, u.last_name
)
SELECT
    user_id,
    CONCAT(first_name, ' ', last_name) AS full_name,
    total_clicks
FROM total
ORDER BY user_id, total_clicks DESC;
```
