Netflix

As a member of the Netflix HR team, you are tasked with addressing employee retention challenges by analyzing employee satisfaction data....

Question 1: The HR team wants to understand the average satisfaction score of employees across different departments. Can you provide the average satisfaction score rounded down to the nearest whole number for each department?

```sql
SELECT department_id, FLOOR(AVG(satisfaction_score))
FROM employee_satisfaction
GROUP BY department_id
```

Question 2: In addition to the previous analysis, the HR team is interested in knowing the average satisfaction score rounded up to the nearest whole number for each job category. Can you calculate this using the same data?

```sql
SELECT job_category_id, CEIL(AVG(satisfaction_score))
FROM employee_satisfaction
GROUP BY job_category_id
```

Question 3: The HR team wants a consolidated report that includes both the rounded down and rounded up average satisfaction scores for each department and job category. Please rename the columns appropriately to 'Floor_Avg_Satisfaction' and 'Ceil_Avg_Satisfaction'.

```sql
SELECT  department_id,
         job_category_id,
        FLOOR(AVG(satisfaction_score)) AS Floor_Avg_Satisfaction,
        CEIL(AVG(satisfaction_score)) AS Ceil_Avg_Satisfaction
FROM employee_satisfaction
GROUP BY department_id, job_category_id
```
