Question 1: For content published in May 2024, which creator IDs show the highest new follower growth within each content type? If a creator published multiple of the same content type, we want to look at the total new follower growth from that content type.

```
with total AS(
    SELECT creator_id, content_type, SUM(new_followers_count)
AS total_new_follower
    FROM fct_creator_content
    WHERE published_date >= '2024-05-01' AND published_date <
'2024-06-01'
    GROUP BY creator_id, content_type),

ranking AS(
    SELECT *,
        DENSE_RANK() OVER(PARTITION BY content_type ORDER BY t
otal_new_follower DESC) AS compare
    FROM total)

SELECT * FROM ranking
WHERE compare = 1
```

Question 2: Your Product Manager requests a report that shows impressions, likes, comments, and shares for each content type between April 8 and 21, 2024. She specifically requests that engagement metrics are unpivoted into a single 'metric type' column.

```
SELECT content_type, 'impressions' AS metric, SUM(impressions_
count) AS value
FROM fct_creator_content
WHERE published_date >= '2024-04-08' AND published_date < '202
4-04-22'
GROUP BY content_type

UNION ALL

SELECT content_type, 'likes' AS metric, SUM(likes_count) AS va
lue
FROM fct_creator_content
WHERE published_date >= '2024-04-08' AND published_date < '202
4-04-22'
GROUP BY content_type

UNION ALL

SELECT content_type, 'comments' AS metric, SUM(comments_count)
AS value
FROM fct_creator_content
WHERE published_date >= '2024-04-08' AND published_date < '202
4-04-22'
GROUP BY content_type

UNION ALL

SELECT content_type, 'shares' AS metric, SUM(shares_count) AS
value
FROM fct_creator_content
WHERE published_date >= '2024-04-08' AND published_date < '202
4-04-22'
GROUP BY content_type;
```

Question 3: For content published between April and June 2024, can you calculate for each creator, what % of their new followers came from each content type?

```
with each_content AS(
  SELECT creator_id, content_type, SUM(new_followers_count) AS
total_follower_content
  FROM fct_creator_content
  WHERE published_date >= '2024-04-01' AND published_date < '2
024-07-01'
  GROUP BY creator_id, content_type),

  calculate AS(
    SELECT *,
      SUM(total_follower_content) OVER(PARTITION BY creator_id)
AS cumsum
    FROM each_content)

SELECT c.creator_id,
       creator_name,
       content_type,
       ROUND(total_follower_content::DECIMAL / cumsum * 100.0,
2) AS percentage
FROM calculate AS c
INNER JOIN dim_creator AS d
ON c.creator_id = d.creator_id
```
