

Electronic Arts

You are a Product Analyst for the Star Wars Game Development team investigating player storyline interactions....

Question 1: For each storyline component, how many unique players interacted with that component during the entire month of May 2024? If a storyline component did not have any interactions, return the component name with the player count of 0.

```
SELECT component_name,  
       COALESCE(COUNT(DISTINCT(player_id)),0) AS unique_players  
FROM dim_storyline_components  
LEFT JOIN fct_storyline_interactions  
ON dim_storyline_components.storyline_component_id = fct_storyline_interactions.storyline_component_id  
AND strftime('%Y-%m',interaction_date) = '2024-05'  
GROUP BY component_name
```

Question 2: What is the total number of storyline interactions for each storyline component and player combination during May 2024? Consider only those players who have interacted with at least two different storyline components.

```
with total AS(
  SELECT player_id, COUNT(DISTINCT(f.storyline_component_id))
  FROM fct_storyline_interactions AS f
  INNER JOIN dim_storyline_components AS d
  ON f.storyline_component_id = d.storyline_component_id
  WHERE TO_CHAR(interaction_date, 'YYYY-MM') = '2024-05'
  GROUP BY player_id
  HAVING COUNT(DISTINCT(f.storyline_component_id)) >= 2)

SELECT player_id, storyline_component_id, COUNT(interaction_id)
FROM fct_storyline_interactions
WHERE player_id IN (SELECT player_id FROM total)
  AND TO_CHAR(interaction_date, 'YYYY-MM') = '2024-05'
GROUP BY player_id, storyline_component_id
```

Question 3: Can you rank the storyline components by the average number of interactions per player during May 2024? Provide list of storyline component names and their ranking.

```
WITH total AS (  
  SELECT  
    storyline_component_id,  
    COUNT(interaction_id)::NUMERIC / COUNT(DISTINCT player_id)  
  AS avg_interaction  
  FROM fct_storyline_interactions  
  WHERE TO_CHAR(interaction_date, 'YYYY-MM') = '2024-05'  
  GROUP BY storyline_component_id  
)  
  
SELECT component_name,  
       DENSE_RANK() OVER (ORDER BY avg_interaction DESC) AS ranking  
FROM total AS t  
INNER JOIN dim_storyline_components AS d  
ON t.storyline_component_id = d.storyline_component_id
```
