

Walmart

As a Business Analyst for the Store Operations team at Walmart, you are tasked with examining checkout wait times to enhance the customer shopping experience....

Question 1: What is the average checkout wait time in minutes for each Walmart store during July 2024? Include the store name from the dim_stores table to identify location-specific impacts. This metric will help determine which stores have longer customer wait times.

```
SELECT
    store_name,
    AVG(EXTRACT(EPOCH FROM checkout_end_time) - EXTRACT(EPOCH FROM checkout_start_time)) / 60.0 AS avg_wait_minutes
FROM dim_stores
INNER JOIN fct_checkout_times
USING (store_id)
WHERE TO_CHAR(checkout_end_time, 'YYYY-MM') = '2024-07'
      AND TO_CHAR(checkout_start_time, 'YYYY-MM') = '2024-07'
GROUP BY store_name;
```

Question 2: For the stores with an average checkout wait time exceeding 10 minutes in July 2024, what are the average checkout wait times in minutes broken down by each hour of the day? Use the store information from dim_stores to ensure proper identification of each store. This detail will help pinpoint specific hours when wait times are particularly long.

```
WITH avg_checkout_times AS (  
    SELECT  
        fct.store_id,  
        AVG(EXTRACT(EPOCH FROM fct.checkout_end_time) - EXTRACT(EPOCH FROM fct.checkout_start_time)) / 60.0 AS avg_wait_time_minutes  
    FROM fct_checkout_times fct  
    WHERE TO_CHAR(fct.checkout_start_time, 'YYYY-MM') = '2024-07'  
    GROUP BY fct.store_id  
    HAVING AVG(EXTRACT(EPOCH FROM fct.checkout_end_time) - EXTRACT(EPOCH FROM fct.checkout_start_time)) / 60.0 > 10  
)  
hourly_wait_times AS (  
    SELECT  
        fct.store_id,  
        TO_CHAR(fct.checkout_start_time, 'HH24') AS checkout_hour,  
        AVG(EXTRACT(EPOCH FROM fct.checkout_end_time) - EXTRACT(EPOCH FROM fct.checkout_start_time)) / 60.0 AS avg_wait_time_minutes  
    FROM fct_checkout_times fct  
    WHERE TO_CHAR(fct.checkout_start_time, 'YYYY-MM') = '2024-07'  
        AND fct.store_id IN (SELECT store_id FROM avg_checkout_times)  
    GROUP BY fct.store_id, TO_CHAR(fct.checkout_start_time, 'HH24')  
)  
SELECT store_name, location, checkout_hour, avg_wait_time_minutes  
FROM dim_stores  
INNER JOIN hourly_wait_times  
USING (store_id)  
ORDER BY store_name, location;
```

Question 3: Across all stores in July 2024, which hours exhibit the longest average checkout wait times in minutes? This analysis will guide recommendations for optimal staffing strategies.

```
WITH hourly_wait_times AS (  
    SELECT  
        TO_CHAR(fct.checkout_start_time, 'HH24') AS checkout_h  
        our,  
        AVG(EXTRACT(EPOCH FROM fct.checkout_end_time) - EXTRACT(EPOCH FROM fct.checkout_start_time)) / 60.0 AS avg_wait_time  
        _minutes  
    FROM fct_checkout_times fct  
    WHERE TO_CHAR(fct.checkout_start_time, 'YYYY-MM') = '2024-  
07'  
    GROUP BY TO_CHAR(fct.checkout_start_time, 'HH24')  
)  
SELECT *  
FROM hourly_wait_times  
ORDER BY avg_wait_time_minutes DESC;
```
