

Netflix

As a Data Analyst on the Netflix Marketing Data Team, you are tasked with analyzing the efficiency of marketing spend in various emerging markets....

Question 1: Retrieve the total marketing spend in each country for Q1 2024 to help inform budget distribution across regions.

```
SELECT
    d.country_name,
    SUM(m.amount_spent) AS total_spend
FROM dimension_country d
JOIN fact_marketing_spend m
    ON d.country_id = m.country_id
WHERE m.campaign_date BETWEEN DATE '2024-01-01' AND DATE '2024-03-31'
GROUP BY d.country_name;
```

Question 2: List the number of new subscribers acquired in each country (with name) during January 2024, renaming the subscriber count column to 'new_subscribers' for clearer reporting purposes.

```
SELECT
    d.country_name,
    SUM(s.num_new_subscribers) AS new_subscribers
FROM dimension_country d
JOIN fact_daily_subscriptions s
    ON d.country_id = s.country_id
WHERE s.signup_date BETWEEN DATE '2024-01-01' AND DATE '2024-01-31'
GROUP BY d.country_name;
```

Question 3: Determine the average marketing spend per new subscriber for each country in Q1 2024 by rounding up to the nearest whole number to evaluate campaign efficiency.

```
WITH Q1_marketing AS (  
    SELECT country_id, SUM(amount_spent) AS total_spend  
    FROM fact_marketing_spend  
    WHERE campaign_date BETWEEN DATE '2024-01-01' AND DATE '2024-03-31'  
    GROUP BY country_id  
) ,  
Q1_subscriptions AS (  
    SELECT country_id, SUM(num_new_subscribers) AS total_subscribers  
    FROM fact_daily_subscriptions  
    WHERE signup_date BETWEEN DATE '2024-01-01' AND DATE '2024-03-31'  
    GROUP BY country_id  
)  
SELECT  
    d.country_name,  
    CEIL(m.total_spend * 1.0 / NULLIF(s.total_subscribers, 0)) AS spend_per_subscriber  
FROM dimension_country d  
JOIN Q1_marketing m ON d.country_id = m.country_id  
JOIN Q1_subscriptions s ON d.country_id = s.country_id;
```
