

Amazon

As a Data Analyst on the Amazon Prime product analytics team, you are tasked with evaluating Prime member engagement with exclusive promotions....

Question 1: To assess the popularity of promotions among Prime members, how many Prime members purchased deals in January 2024? What is the average number of deals purchased per member?

```
WITH jan AS(  
    SELECT member_id,  
           COUNT(DISTINCT deal_id) AS deals_purchased  
    FROM fct_prime_deals  
    WHERE purchase_date >= '2024-01-01' AND purchase_date < '2024-02-1'  
    GROUP BY member_id)  
  
SELECT COUNT(member_id) AS number_members,  
       AVG(deals_purchased) AS avg_number_deals  
FROM jan
```

Question 2: To gain insights into purchase patterns, what is the distribution of members based on the number of deals purchased in February 2024? Group the members into the following categories: 1-2 deals, 3-5 deals, and more than 5 deals.

```
WITH feb AS(
  SELECT member_id,
         COUNT(deal_id) AS deals_purchased
  FROM fct_prime_deals
  WHERE purchase_date >= '2024-02-01' AND purchase_date < '2024-03-01'
  GROUP BY member_id),
segment AS(
  SELECT *,
         CASE WHEN deals_purchased <= 2 THEN '1-2 Deals'
              WHEN deals_purchased <= 5 THEN '3-5 Deals'
              ELSE 'More than 5 Deals' END AS deal_category
  FROM feb)

SELECT deal_category, COUNT(*) AS number_members
FROM segment
GROUP BY deal_category
```

Question 3: To target highly engaged members for tailored promotions, can we identify Prime members who purchased more than 5 exclusive deals between January 1st and March 31st, 2024? How many such members are there and what is their average total spend on these deals?

```
WITH total AS(  
  SELECT member_id, COUNT(deal_id), SUM(purchase_amount) AS total_money  
  FROM fct_prime_deals  
  WHERE purchase_date >= '2024-01-01' AND purchase_date < '2024-04-01'  
  GROUP BY member_id  
  HAVING COUNT(deal_id) > 5)  
  
SELECT COUNT(member_id), AVG(total_money)  
FROM total
```
