Question 1: For the month of April 2024, which app categories generated the highest total revenue (top 10 only)? This insight will be used to refine monetization strategies for developers.

```
SELECT f.category_id, category_name, SUM(revenue_amount) AS total_revenue
FROM fct_app_revenue AS f
INNER JOIN dim_app_category AS a
ON f.category_id = a.category_id
WHERE revenue_date >= '2024-04-01' AND revenue_date < '2024-05-01'
GROUP BY f.category_id, category_name
ORDER BY 3 DESC
LIMIT 10
```

Question 2: During the second quarter of 2024, how does the weekly revenue ranking of each app category change? The team will use this analysis to identify performance trends and adjust engagement efforts.

```
WITH total AS(
SELECT *, EXTRACT(week FROM revenue_date) AS each_week
FROM fct_app_revenue
WHERE revenue_date >= '2024-04-01' AND revenue_date < '2024-07-01'),

calculate AS(
  SELECT category_id, each_week, SUM(revenue_amount) AS total_amount
  FROM total
  GROUP BY category_id, each_week)

SELECT a.category_id, category_name, each_week, total_amount,
       DENSE_RANK() OVER(PARTITION BY each_week ORDER BY total_amount DESC) AS weekly_ranking
FROM calculate AS c
INNER JOIN dim_app_category AS a
ON c.category_id = a.category_id
ORDER BY each_week, weekly_ranking
```

Question 3: For apps using a subscription monetization model, can you give us the running total revenue by app for every day in April 2024? We are investigating a complaint from app developers about a slow down in revenue in that month.

```
with calculate AS(  
    SELECT d.app_id, revenue_date, revenue_amount  
    FROM dim_monetization_model AS d  
    INNER JOIN fct_app_revenue AS f  
    ON d.app_id = f.app_id  
    WHERE monetization_type = 'subscription'  
        AND revenue_date >= '2024-04-01' AND revenue_date < '2024-05-01'  
  
    SELECT app_id, revenue_date, revenue_amount,  
        SUM(revenue_amount) OVER(PARTITION BY app_id ORDER BY revenue_date) AS total_revenue  
    FROM calculate
```
