As a Product Analyst on the LinkedIn Feed team, you are tasked with analyzing how different content types impact user engagement on the platform....

Question 1: Identify which content formats performed best in July 2024 by reporting their average engagement scores, but only list the formats that achieved an average score of 50 or higher.

```
SELECT content_type, AVG(engagement_score) AS avg_engagement_s  
core  
FROM fct_user_engagement AS f  
INNER JOIN dim_content AS d  
ON f.content_id = d.content_id  
WHERE engagement_date >= '2024-07-01' AND engagement_date < '2  
024-08-01'  
GROUP BY content_type  
HAVING AVG(engagement_score) >= 50  
ORDER BY 2 DESC
```

Question 2: For the first week of August 2024, identify the content type of the content that had the highest engagement score. For that content type, calculate the average engagement score for the entire month of August. If there is a tie for highest engagement score, select the content type with the earliest publish date.

```
WITH ranked AS (  
    SELECT content_id,  
           MAX(engagement_score) AS max_score,  
           DENSE_RANK() OVER (ORDER BY MAX(engagement_score) D  
ESC, MIN(publish_date) ASC) AS rank_score  
    FROM fct_user_engagement AS f  
    INNER JOIN dim_content AS d  
    USING (content_id)  
    WHERE engagement_date BETWEEN DATE '2024-08-01' AND DATE  
'2024-08-07'  
    GROUP BY content_id),  
  
top_content AS (  
    SELECT content_id  
    FROM ranked  
    WHERE rank_score = 1)  
  
SELECT d.content_type, AVG(f.engagement_score) AS avg_engageme  
nt_score  
FROM fct_user_engagement AS f  
INNER JOIN dim_content AS d  
USING (content_id)  
WHERE engagement_date >= '2024-08-01' AND engagement_date < '2  
024-09-01'  
      AND f.content_id IN (SELECT content_id FROM top_content)  
GROUP BY d.content_type;
```

Question 3: During Q3 2024, for each content type, calculate their highest engagement score each week. What was the average of those weekly highs over the quarter? This will help us identify content types that consistently generate peak engagement.

```
SELECT content_type,
       AVG(max_score) AS avg_score_week
FROM(
  SELECT d.content_type,
         EXTRACT(week from engagement_date) AS week,
         MAX(engagement_score) AS max_score
  FROM fct_user_engagement AS f
  INNER JOIN dim_content AS d
  USING (content_id)
  WHERE engagement_date >= '2024-07-01' AND engagement_date <
'2024-10-01'
  GROUP BY d.content_type, EXTRACT(week from engagement_date)
  ORDER BY content_type, week) AS calculate_week
GROUP BY content_type
```
